

LAB – 02 JIRA ASSIGNMENT

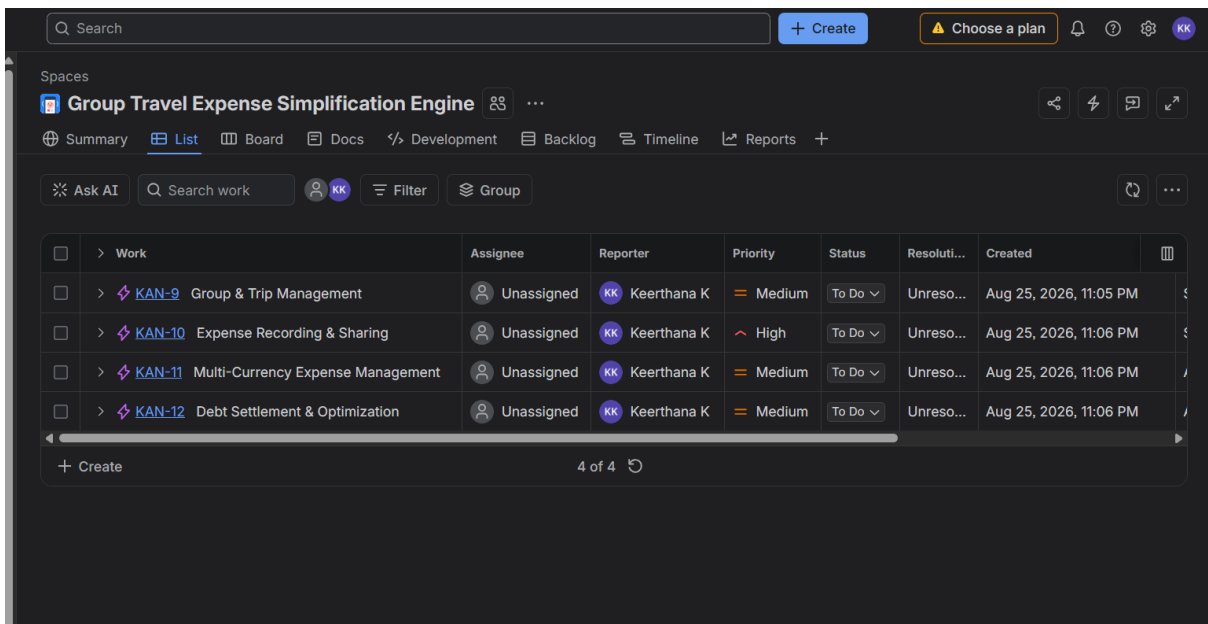

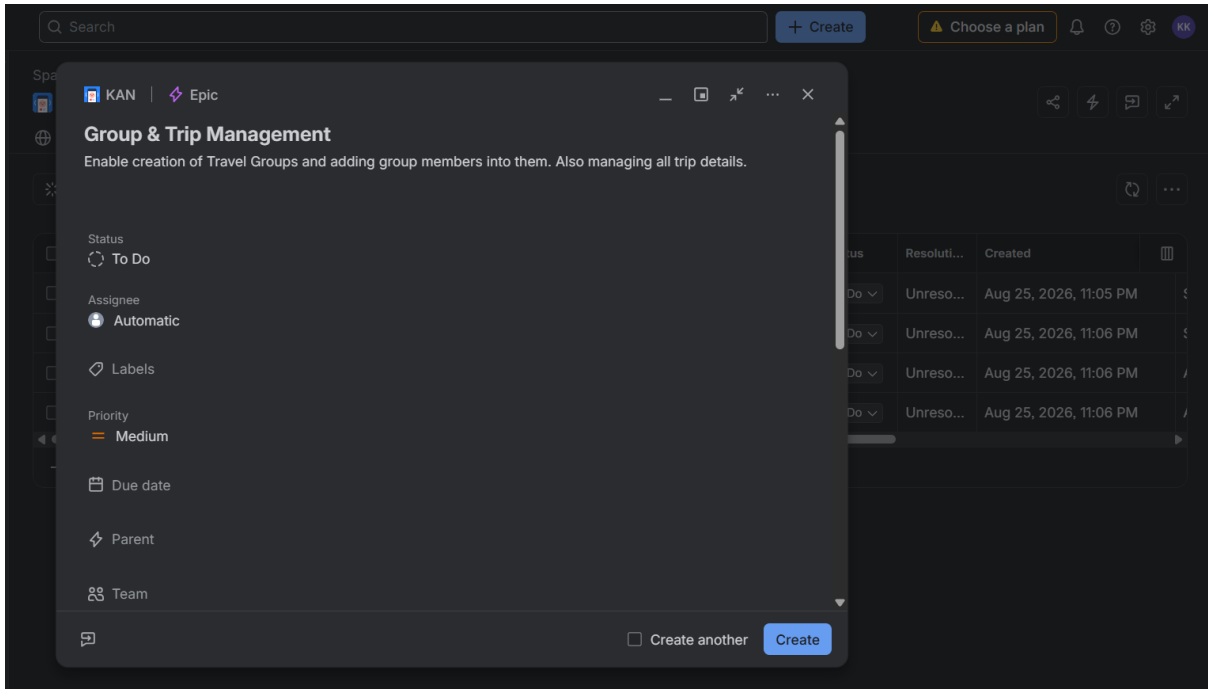

NAME: KEERTHANA K

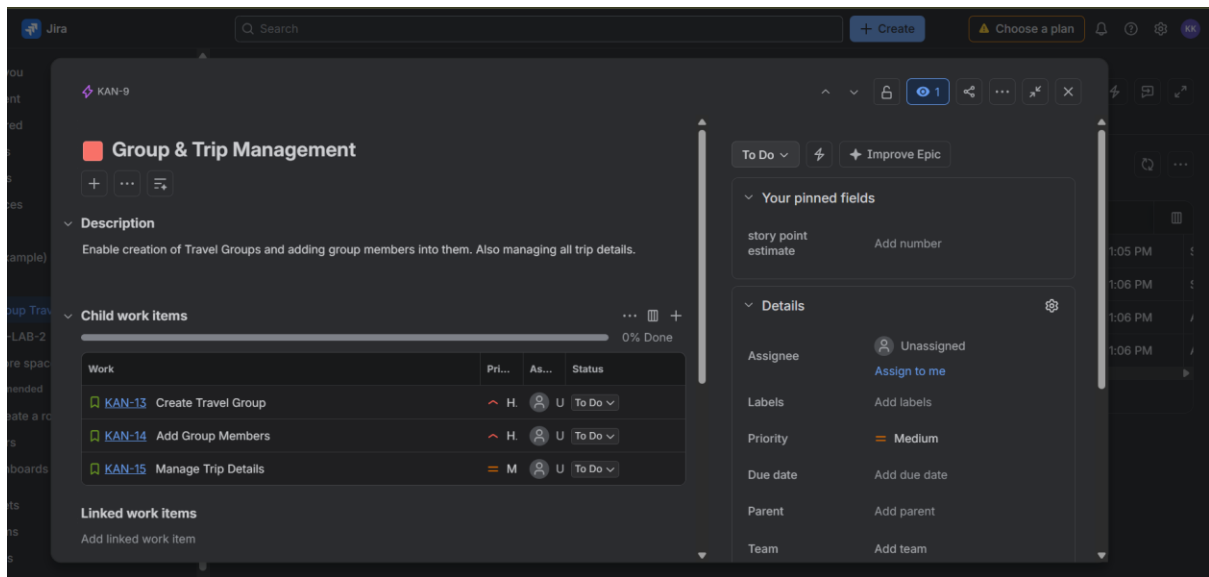

SRN: PES1UG24CS224

PROBLEM STATEMENT: #37

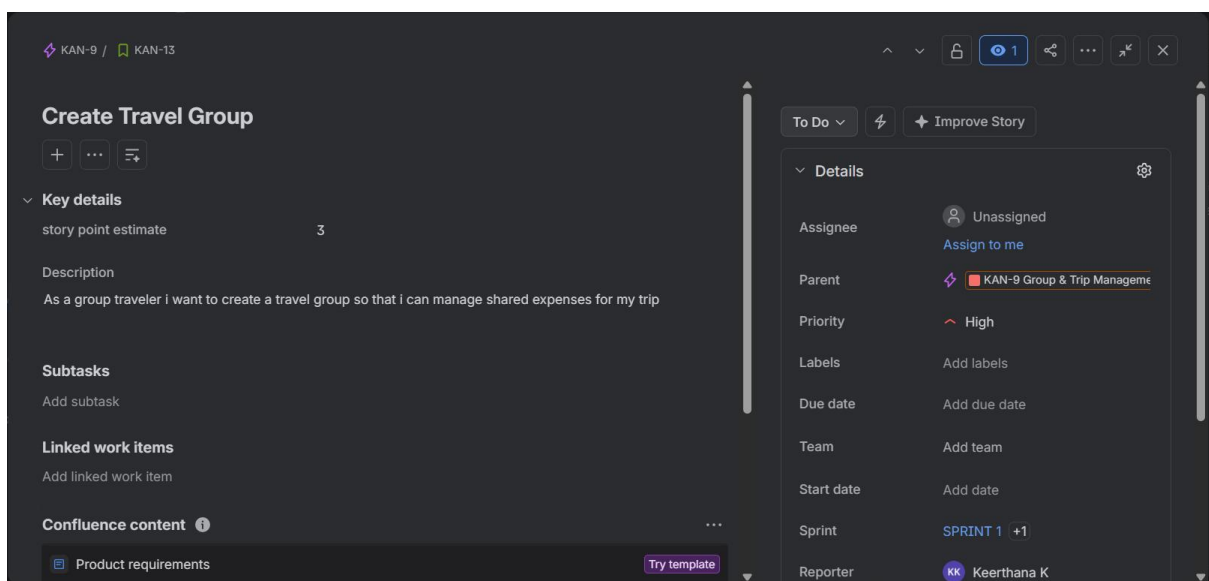

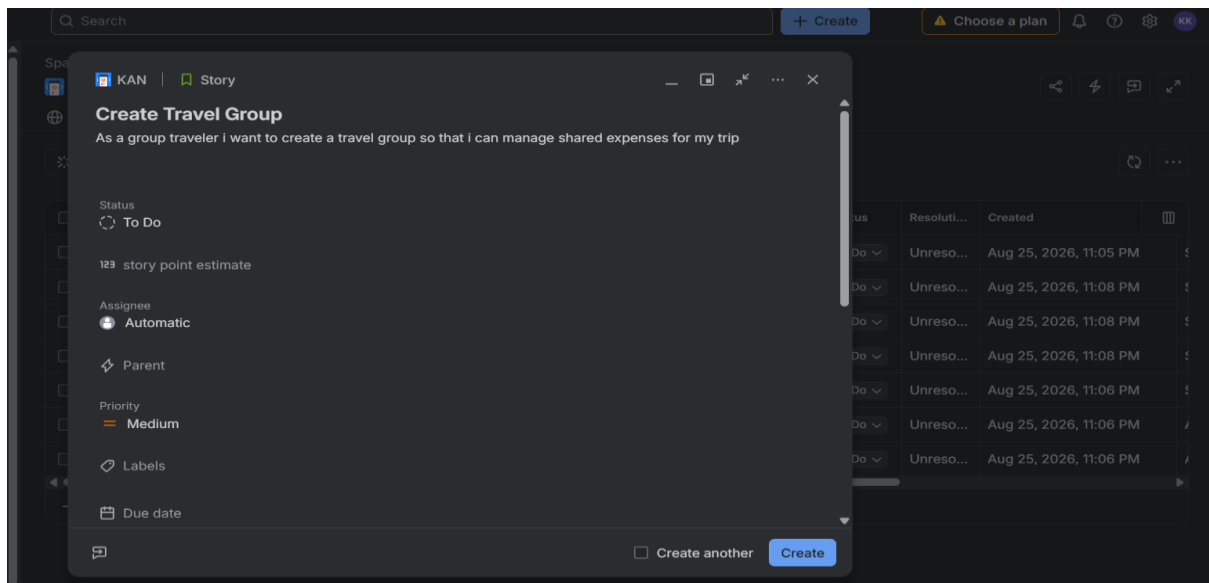

Group Travel Expense Simplification Engine

1. Epic Creation

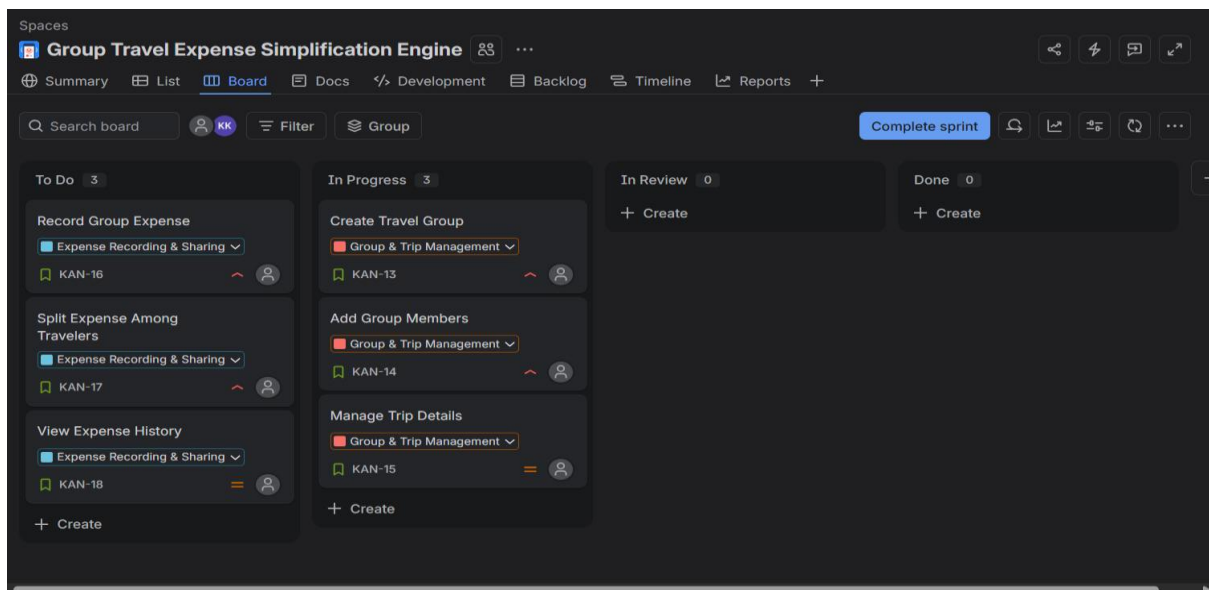

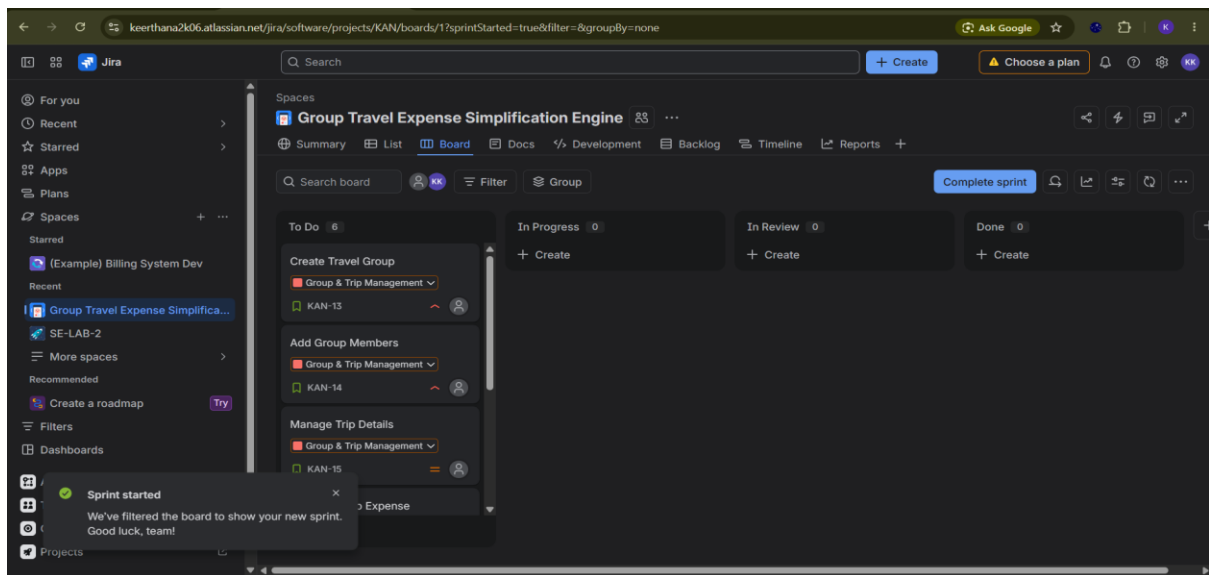

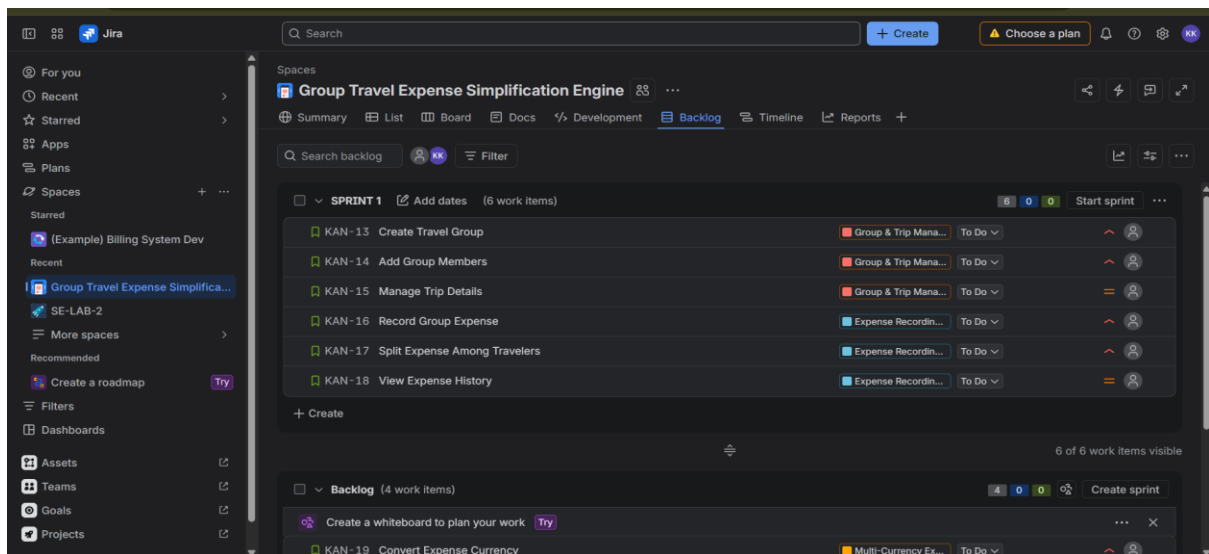

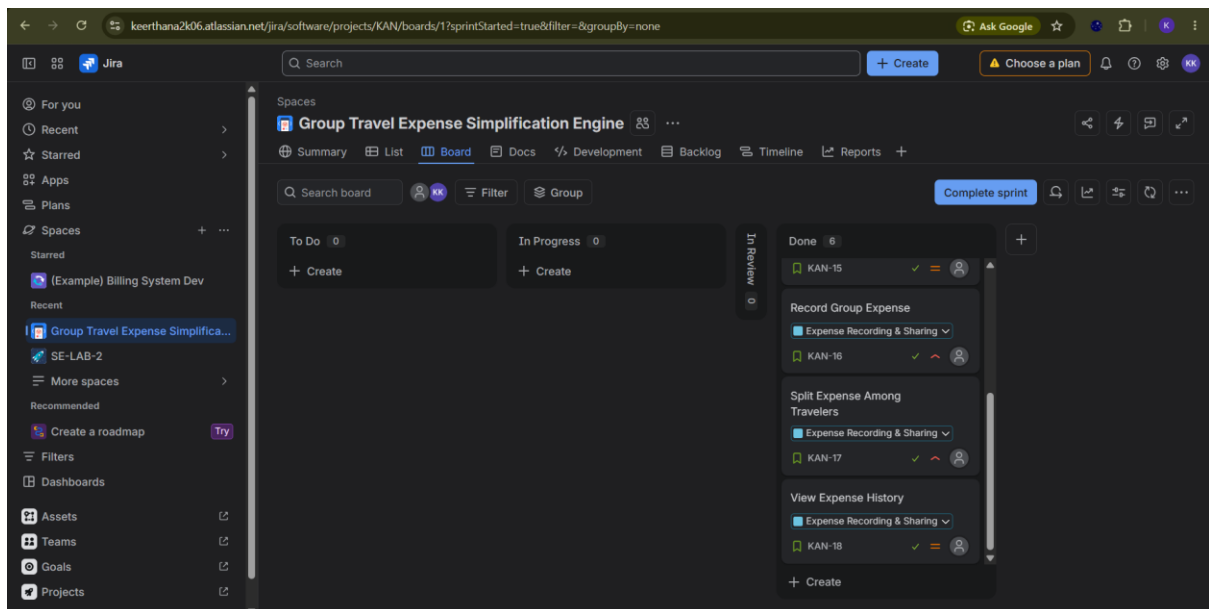

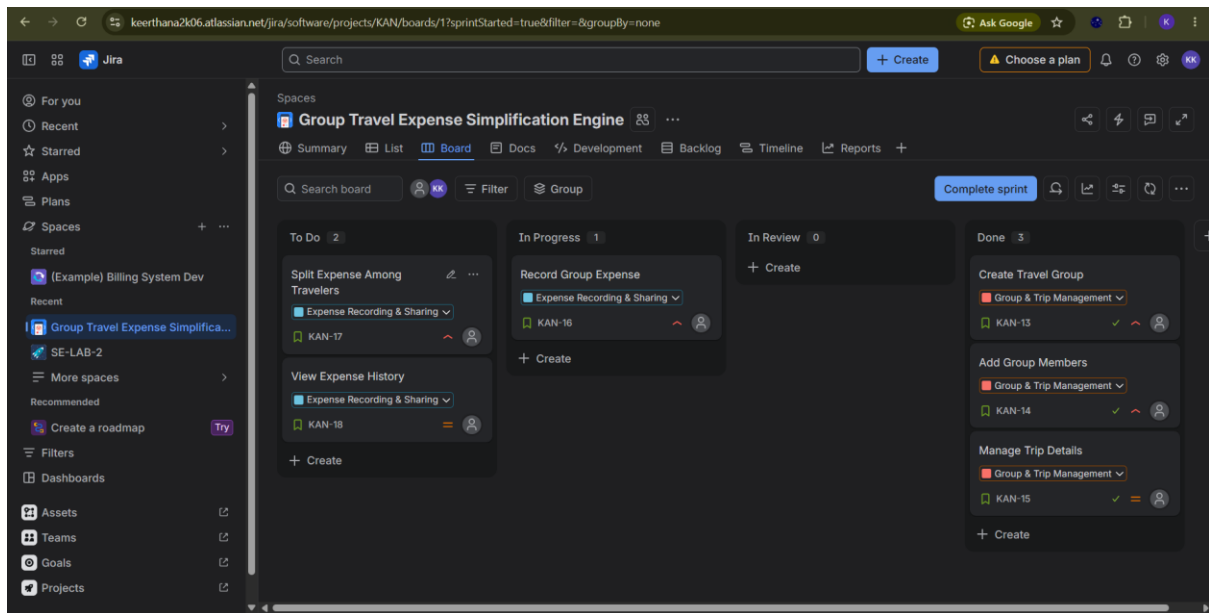

2. Story Creation

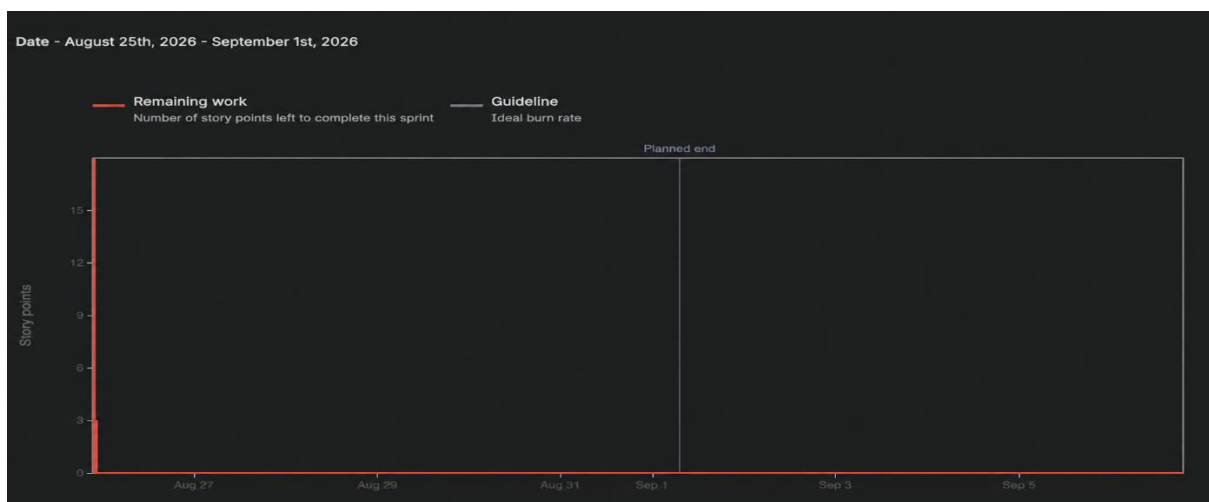

3.a. Sprint Creation 1

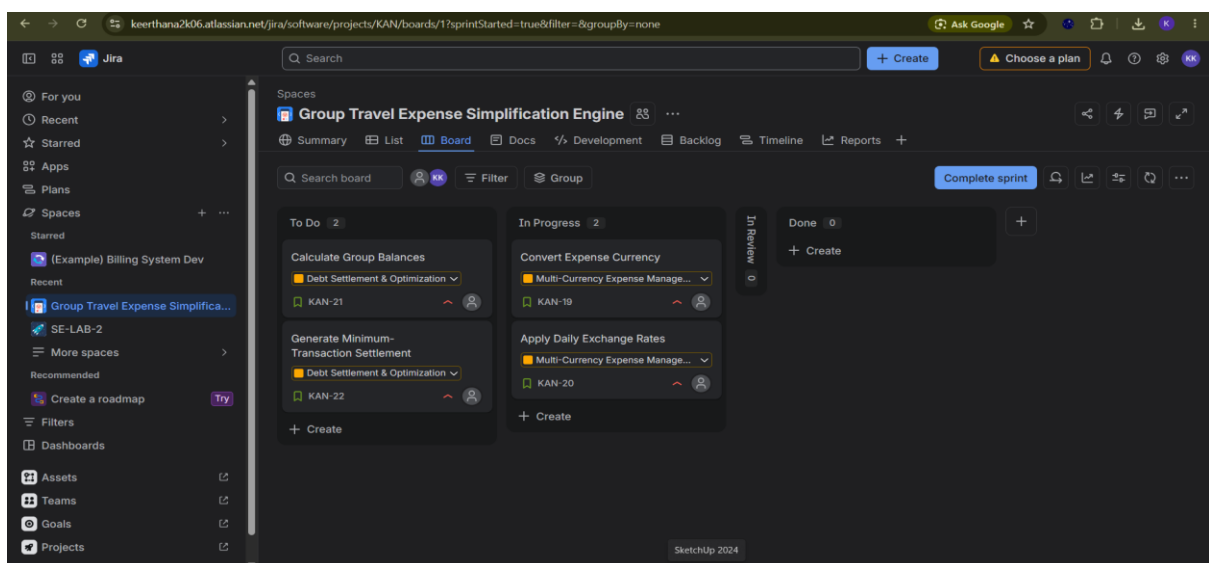

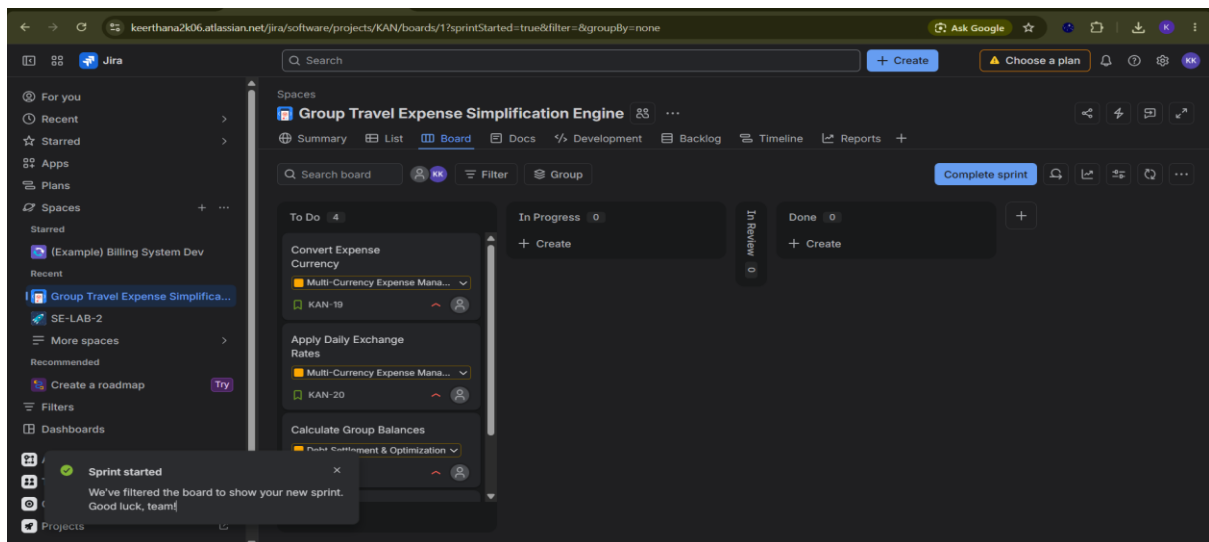

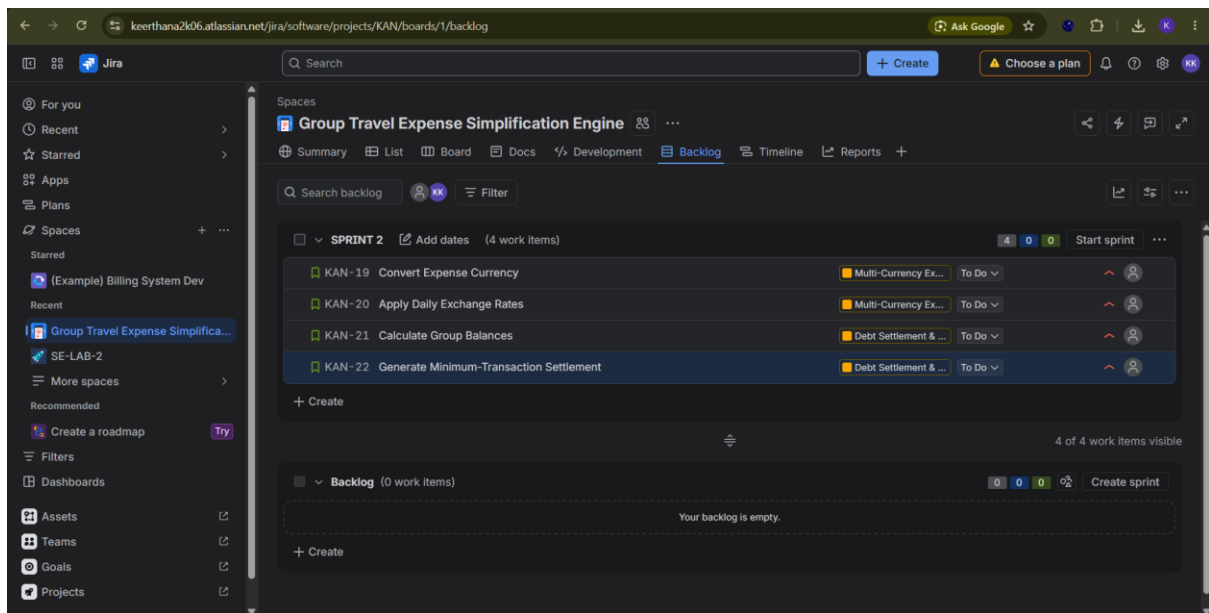

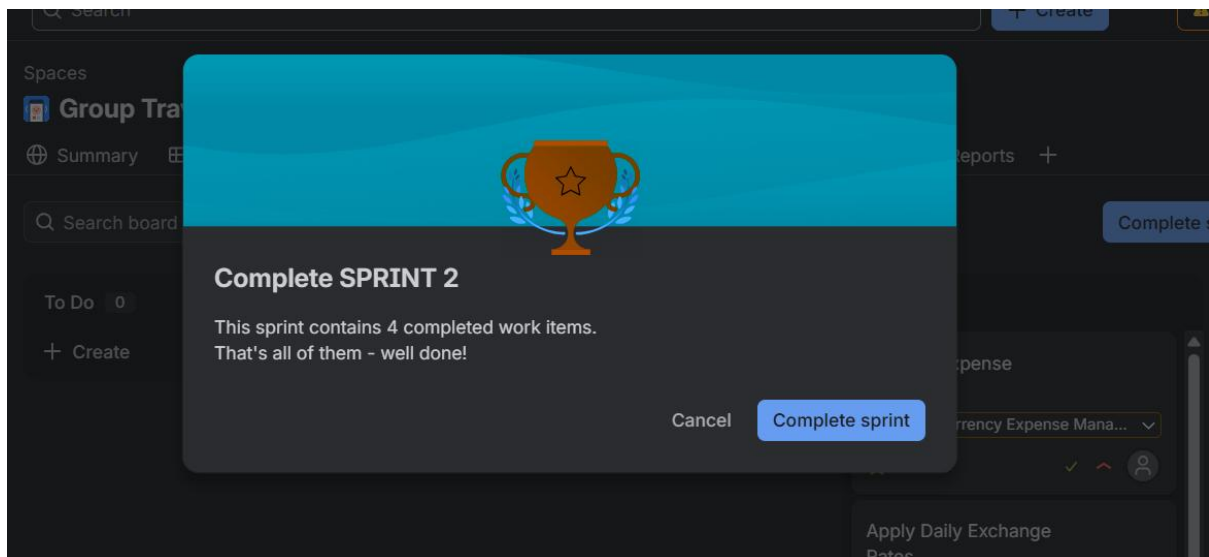

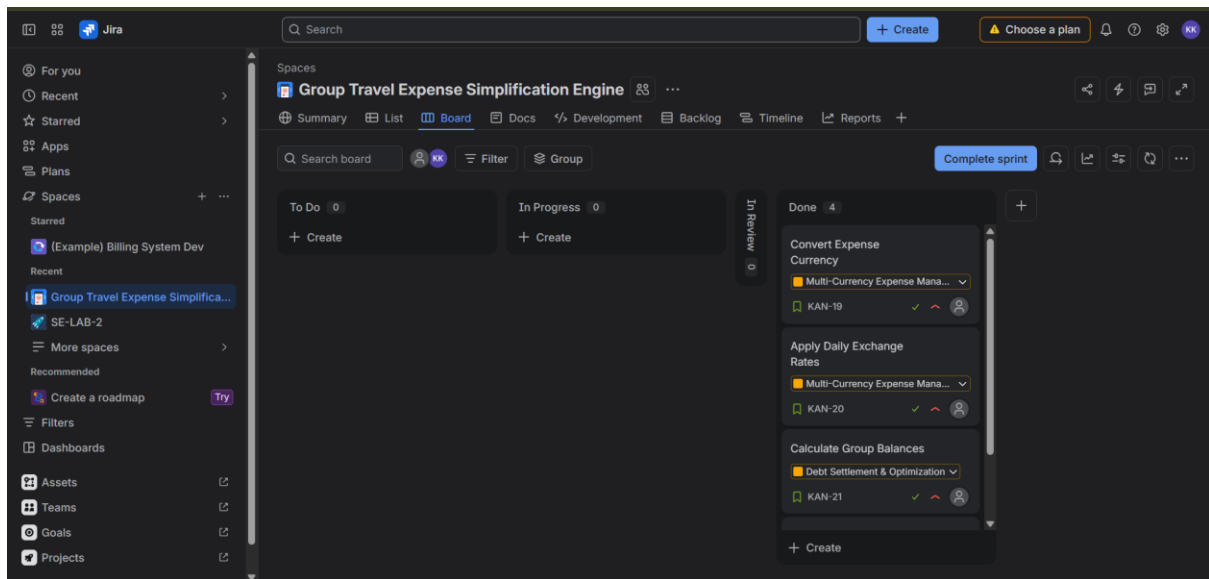

4.a. Burn-down chart of Sprint 1

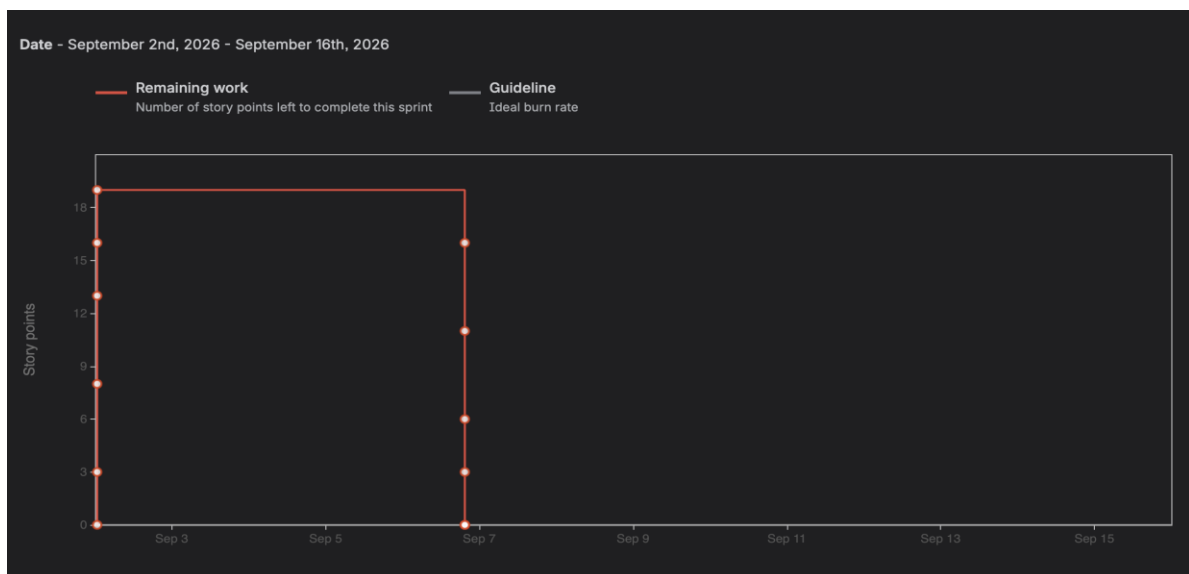

3.b. Sprint Creation 2

4.b. Burn-down chart of Sprint 2

5. Status of Stories changed to “DONE” after completing the 2 sprints

REFLECTION QUESTIONS:

1. Did your estimations reflect the actual effort?

Yes, the estimations were reasonably aligned with the actual effort. The stories were assigned story-point estimates, and Sprint 1 consisted of six stories covering group management and expense recording, while Sprint 2 consisted of four stories covering currency conversion and debt settlement. The burndown charts show that the planned work was completed within the respective sprints.

2. Was your backlog well-prioritized?

Yes, the backlog was reasonably well-prioritized. The work was organized according to the major functional areas of the system. **Sprint 1** focused on the core functionalities such as creating travel groups, adding members, managing trip details, recording expenses, splitting expenses, and viewing expense history. **Sprint 2** then handled multi-currency management and debt settlement. This allowed the fundamental group and expense features to be addressed before the more advanced financial features.

3. How did your simulated sprint align with your plan?

The simulated sprints aligned well with the plan. In **Sprint 1**, the six planned stories were moved through the workflow from **To Do** → **In Progress** → **Done**, and the sprint was completed. Sprint 2 followed the same process with the remaining four stories. After completing both sprints, all stories were marked as **Done**, as shown in the final status screenshots.

4. What insights did the burndown chart give about your team's capacity?

The burndown charts showed that the team was able to complete the planned sprint work within the allocated sprint periods. The remaining work decreased as stories were completed, eventually reaching zero. This indicates that the planned workload for both sprints was manageable within the simulated team capacity. The charts also provide a visual way to track whether work is progressing according to the expected burn rate. Here, I finished it in a day, the graph is a straight descent line.
